PITCH DECK · 2026

CouraLabs

Open-source software with AI integrations. One independent studio, three public projects, all self-hostable.

THE THESIS

AI belongs in software you can read, run and own.

- Useful AI tools are often closed, hosted-only and opaque.
- Developers want to see the code, self-host it and bring their own model keys.
- Where hosting is easier, a hosted version should exist as a choice, not a requirement.

THE STUDIO

One developer. Real repositories. Honest status.

CouraLabs builds open-source projects where AI earns its place. Every claim traces back to a public repo, and pre-release means pre-release.

Open source

Apache 2.0 and GPL 3.0 projects under github.com/CouraLabs.

Self-hostable

Run it on your own infrastructure, on your own files, with your own keys.

Hosted, later

Hosted versions are planned. Nothing is live, so nothing is promised.

PROJECT 01

PRE-RELEASE · V1 IN PROGRESS

Codeboros

A self-hosted autonomous coding agent.

Stack
Bun · TypeScript · Docker

License
Apache 2.0

- Reviews your codebase and pull requests on your schedule.
- Reproduces a reported bug before claiming a fix.
- Tests its own fix in a real browser, on recorded video.
- A named person reviews every fix before it merges.

github.com/CouraLabs/Codeboros

PROJECT 02

USABLE NOW · INSTALL FROM SOURCE

OpenMixing

An MCP server that lets your agent DJ.

Stack
Python · MCP · ffmpeg

License
GPL 3.0

- Analyzes tempo, key, energy and sections per track.
- Builds a set with EQ, filters, tempo, effects and loops.
- Renders the mix offline.
- A local player shows every move the agent made.

github.com/CouraLabs/OpenMixing

PROJECT 03

SELF-HOST TODAY

OpenHouse

Household finance with shared books.

Stack

PostgreSQL · NestJS · React

- One ledger the whole household signs in to.
- Accounts and cards in USD, BRL and EUR.
- Recurring rules, category limits and savings goals.
- Hosted plans planned, one with AI features.

github.com/CouraLabs/OpenHouse

TWO WAYS IN

Self-host for free, or let CouraLabs host it.

Self-host

Available now for OpenMixing and OpenHouse. Clone, configure, run. Codeboros follows at v1.

Hosted by CouraLabs

Planned. Which projects, on what terms and at what price is not decided yet, and nothing is live.

FOUNDER

Rodrigo Coura

Full-stack engineer working remotely from Brazil for US companies, with more than ten years of experience.

- .NET
- Angular · React
- Node.js
- Azure · AI tooling

ROADMAP

What is shipped, and what is next.

- **Now:** OpenMixing and OpenHouse run from source or Docker Compose.
- **Next:** Codeboros v1, and a landing page per project on its own subdomain.
- **Later:** hosted versions, once terms are decided.
